

# Using Forestry for Resilience in Sheep Farming

Malcolm Young, Senior Forestry Consultant

#### Benefits of Woods

- Shelter
- Flock/herd separation
- Removal of fluke areas
- Reduction of diffuse pollution
- Bank stabilisation
- Flood reduction
- Sporting
- Source of firewood / chip-wood
- Alternative income stream
- Succession planning

#### Tax Benefits

- Growing asset which adds value to farm
- No income tax on timber sales or grants
- No capital gains tax on the growth in value of trees
- 100% relief on inheritance tax

#### Woodland Shelter - Benefits

#### Livestock and pasture:

- Reduced wind speeds
  - reduced evapotranspiration
  - reduced evaporative chilling of livestock
  - improved lamb survival 50% reduction
  - reduced ewe mortality after shearing 12%
  - improved weight gain
  - reduced feed costs 20% less

### Woodland Shelter - Benefits

#### Livestock and pasture:

- Leaf fall
  - increased soil organic content, leading to:
  - improved soil water retention & N availability
- Buffering of features:
  - watercourses, reducing diffuse pollution
  - utilisation of marginal areas eg. seasonal flooding
  - 'trapping' features
- Improved water filtration
- Animal health separation of herds

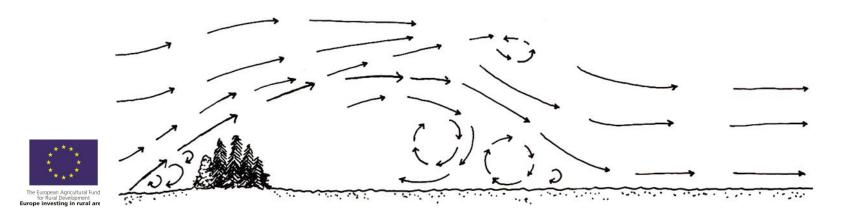

# Shelter Design - Windshield

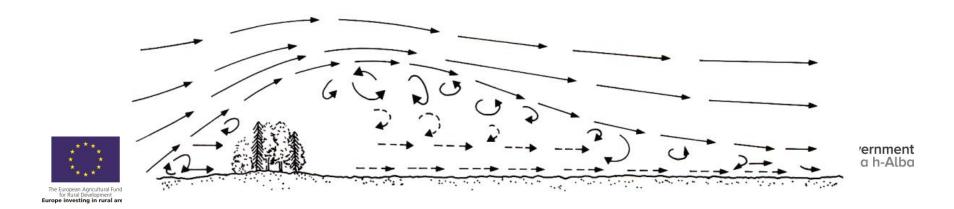

- Virtually impermeable woodland (<40% porosity)...dense conifers</li>
- Reduces wind speed by up to 90%
- Wind speed reduction up to 10 times tree height
- Maximum shelter within 3 to 5 times tree height
- Completely stops wind within small area
- Best for livestock protection
- High turbulence in field

# Shelter Design - Windbreak

- SR FARM ADVISORY SERVICE
- Permeable woodland (40 – 60% porosity)...broadleaves/mixed
- Reduces wind speed by up to 70%
- Wind speed reduction 20 30 times tree height
- Achieves reduced wind speeds across large area
- Little turbulence, well above ground
- Best for crops and silage

#### Trees and water

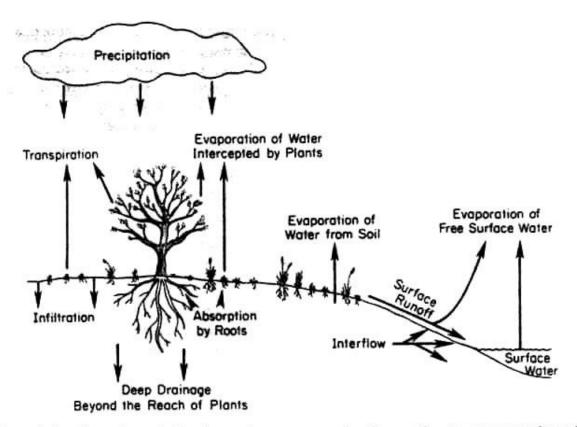

Figure 6.1. The water cycle showing major processes and pathways of water movement through a watershed. Water inflow = water outflow ± storage.

#### Trees and water

- Canopy reduces speed at which rain reaches ground
- Evapotranspiration
- Over-ground flow vastly reduced
- Water infiltration to soil 60 times greater in woodland than pasture
- Water follows live tree roots, reaching deeper into soil than pasture
- 90% roots in top 60cm soil
- ADHB field drainage 450mm deep

#### **Trees and Water**

- Peak flow reduced by up to 40%
- Sediment trapping
- Effects achieved only two years after planting
- Pontbren study, Wales

# **Creating Woodlands**

- Planting of shelter belts across slopes
- Broadleaves or mixed
- Minimum width 20m

# Woodland Type & Location

- Type of ground available:
  - Peat depth and soils
  - Wet
  - Topography
  - Access
  - Objectives what are you trying to achieve?

# Woodland Type & Location

- eg. dens:
  - Steep sided
  - Inaccessible
  - Conifer grants dense planting unharvestable – windblow
  - Broadleaves wide spaced planting, no need to harvest

# Woodland Type & Location

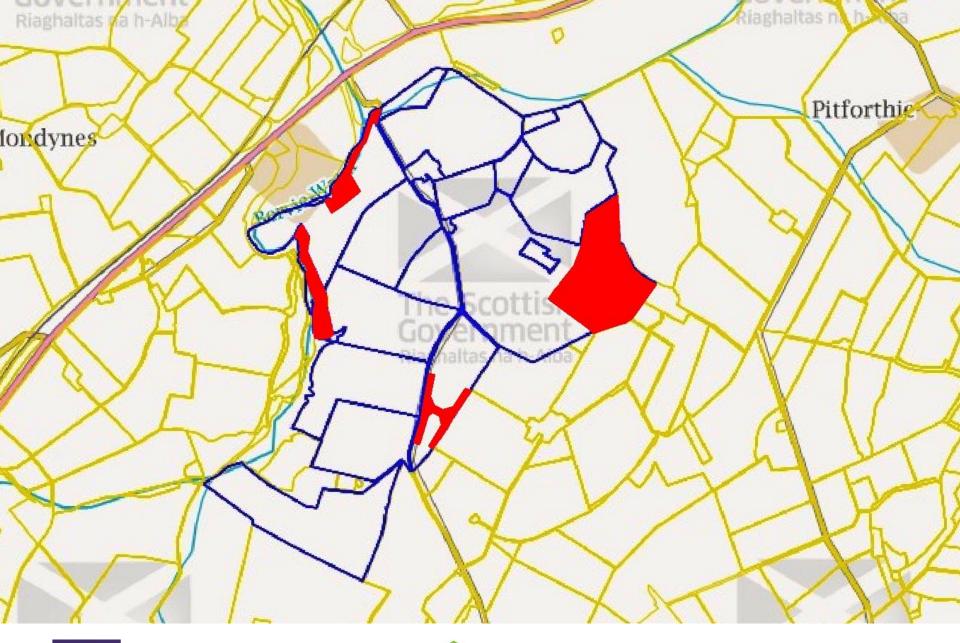

- eg. hill ground:
  - Moderate slope
  - Access existing? Is new access viable?
  - Conifer grants establish harvestable timber crop
  - Broadleaves native upland birch, no produce

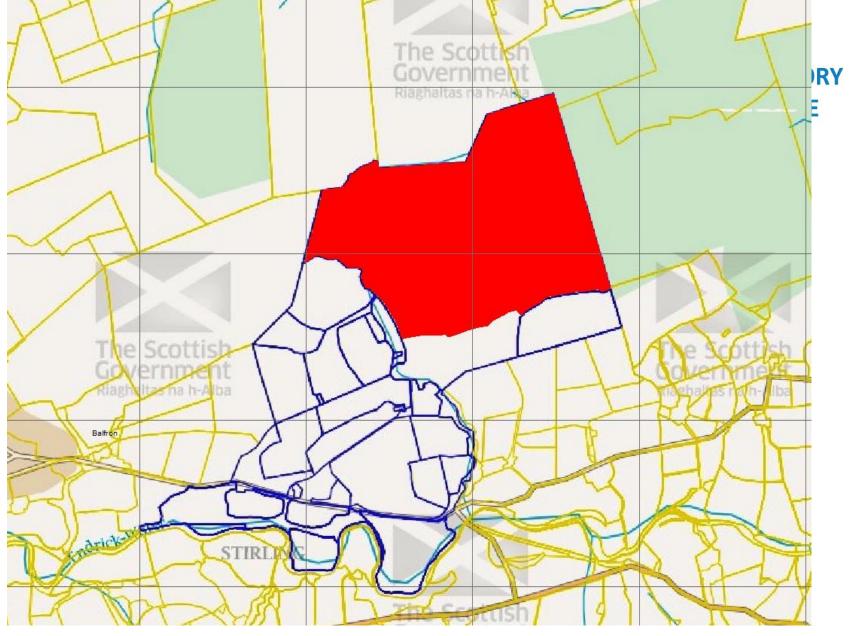

# FGS Funding for New Woods

- Initial planting grant
- Coupled with annual (x 5) maintenance grant
- Fencing:deer, stock, rabbit, upgrade, marking
- Tubes and vole guards
- Bracken control
- Gorse removal (new)
- Sheep and Trees package
- Keep Basic Payment

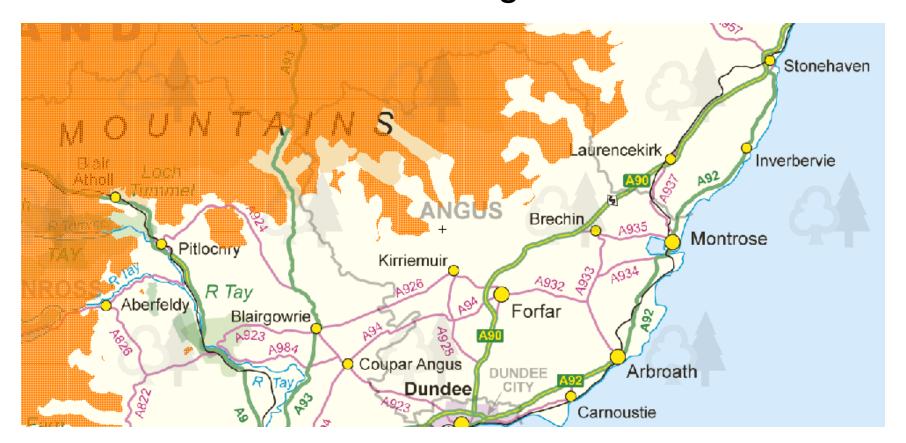

# Funding for New Woodland

Increased rate for fencing

#### Some Basic Rules

- No planting permitted on peat >50cm
- Minimum width 20m
- Productive options minimum area 2ha
- Other options minimum area 0.25ha
- In reality, minimum viable area approx. 6ha
- Value of fence/tube grants <150% of initial planting grant</li>
- Scoring!

# **Planting Grants**

#### Payment rates in standard areas

#### Payment rates in target areas

Plus Basic payment

### **Sheep And Trees**

- Access to infrastructure grant with planting grant
- 10 to 50ha productive conifer grant
- 30m road per ha, capped at 1500m
- Capable of carrying timber lorries
- Infrastructure (roading)
  - Roading £25.80/m
  - Lay-bys £6.60/sq. m
  - Bell-mouth junction£32.40/sq. m

## Agroforestry

- Utilising the same piece of ground for both tree forestry and agriculture.
- Silvo-arable
  - Trees typically planted in avenues, arable strips wide enough to accommodate two passes of widest machinery (no grant)
- Silvo-pastoral
  - Trees planted throughout grazed ground (grant-aided)

## Agroforestry

### Agroforestry

SR FARM ADVISORY SERVICE

- Silvo-pastoral
  - Land Capability for Agriculture, 3.1 4.2
  - -PGRS
  - Sheep grazing only, for contract period, 20 yr
  - Productive broadleaves (20% fruit trees)
  - -200 stems/ha OR 400 stems/ha
  - Trees guarded, weldmesh and stobs x 2
  - Maintenance includes pruning, stem quality
  - -400 trees/ha £3,600/ha, maint £84/ha/yr x 5
  - -200 trees/ha £1,860/ha, maint £48/ha/yr x 5
  - Grant = £9/tree, cost = £20/tree (contractors)
